

PANELS

Modular panels are manufactured from industrial strength .090 THK aluminum and are available in various dimensions. The length of a McCain Walls system is infinite and can be customizable to meet the specs of any job.

SPECIFICATIONS

| Variable Angle Panel | MW-VAP-AL-120-W | 117" | 6" | 33 lbs |

DIAGRAMS

The standard height of our wall panels is 8' and 10'. Wall structures can be stacked for higher walls systems. Panels come in three different sizes: 6", 12", and 24".

Optional horizontal sliding panels and variable angle panels are available to customize a McCain Walls system to meet unique specs, like non-90-degree angles and close off small gaps.

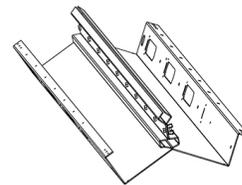

For a complete list of door kit configurations or a detailed view of the single and double-door options, please consult your *McCain Walls* representative.
